SUMMARY

A Software Developer with extensive experience building and customizing production-grade web and ERP systems using Django, React, and Frappe/ERPNext. Specialized in backend development, workflow automation, and translating business requirements into scalable technical solutions. Proven ability to collaborate closely with stakeholders and end-users, operate within production environments, and engage cross-functional teams to deliver maintainable software.

TECHNICAL SKILLS

Programming Languages

JavaScript, TypeScript, Python, Dart, HTML, CSS

Frameworks & Platforms

Django, React.js, Node.js, Flutter, Frappe/ERPNext, Odoo

Databases

PostgreSQL, MySQL, MongoDB

Tools & Technologies

Git, RESTful APIs, Docker, Postman, MVC Architecture, API Integration, AWS, CI/CD, Github

Development Practices

Backend Development, Full-Stack Development, ERP Customization, Database Design, Code Review, Agile Collaboration

PROFESSIONAL EXPERIENCE

Software Developer (Full-Stack), Simbatech Trading PLC

Nov 2024 – Dec 2025

- Designed, developed, and maintained full-stack web applications using Django (backend) and React.js (frontend) to support internal and client-facing business operations.
- Customized and extended Frappe/ERPNext modules by creating custom doctypes, workflows, validations, and server-side logic aligned with business processes.
- Collaborated with non-technical stakeholders to gather requirements and convert them into scalable technical solutions.
- Improved system reliability and maintainability by implementing structured database schemas and clean REST APIs, reducing recurring production issues and simplifying future feature development.
- Participated in peer code reviews and refactoring efforts, contributing to higher code quality and reduced technical debt.

Junior Software Developer, Fineto IoT Products - Internship

Feb 2024 – Sep 2024

- Customized and implemented Frappe/ERPNext business solutions, supporting real-world ERP deployments and business operations.
- Developed backend logic and configurations that replaced manual processes with structured, system-driven workflows.
- Engaged in full-stack development tasks, including database integration, RESTful API usage, and feature implementation.
- Contributed to production system stability by resolving technical issues in a collaborative environment.

EDUCATION

Bachelor of Software Engineering

Jimma University (JIT) — Faculty of Computing & Informatics

- Thesis: Chatbot-integrated support system for breast cancer patients, focusing on system design and user support workflows.
- GPA: 3.30/4.00
